

Description

Compact flow meter with 4 ... 20 mA analogue output and switching output or pulse output. 10 x LED bar which shows the actual flow rate and the status of the switching point or the pulse output configuration. Suitable for air, compressed air, nitrogen and oxygen. Available as screw-in type, plug-in type for sensor adapter TP/ball valve BV or push-in type.

Features

- wear-resistant compact design, with stainless steel 1.4571 monitoring head and housing
- 4 ... 20 mA analogue output (4 mA = 0 Nm³/h, 20 mA = operating range final value)
- switching output: switch point can be adjusted steplessly or to 10 predefined values regardless of the actual flow speed
- pulse output: adjustable quantity per pulse
- 10 x LED bar (red, green, orange) which shows the actual flow rate and the status of the switching point or the pulse output configuration
- fluid temperature -25 ... 100 °C (screw-in type, plug-in type for sensor adapter TP/ball valve BV) and -25 ... 130 °C (push-in type) respectively
- M12 plug-in electrical connection
- switching output/pulse output with HighSide-FET output
- protected against short circuits and overloads

| ⁽¹⁾ at constant temperature and flow conditions, and stable thermal conductivity | | | | | | |
| ⁽²⁾ delay with the switch point set to 18 Nm/s and the flow at 20 Nm/s, after a sudden complete stop | | | | | | |
| ⁽⁴⁾ the accuracy values were determined under ideal conditions: symmetrical complete flow profile, correct mounting in the pipe, inlets and outlets according to EN ISO 5167-1 | | | | | | |
| ⁽⁵⁾ the extended temperature range up to 130 °C/266 °F is only allowed with FC50-CA...00/22... (push-in type) and a minimum distance of 15 cm (5.91 in) between electronic housing and fluid, in this case max. ambient temperature must not exceed 50 °C (122 °F) | | | | | | |
| ⁽⁶⁾ Sensor calibration is performed at approx. 25 °C and approx. 970 mbar abs. in TP-03, inside pipe diameter 29,7 mm (FC50...01/02) and inside pipe diameter 79,2 mm (FC50...00) respectively. Specifications dependent on the measuring range final value always refer to 68 Nm/s (FB2). | | | | | | |

Operating ranges

The operating/measuring ranges are determined by the inner pipe diameter (see table). They can be calculated with the following equation:

$$Q = V_n \times A_r$$

Q (Nm³/h) - flow quantity

V_n (Nm/h) - average standard velocity

A_r (m²) - inner pipe cross section

Standard velocity measuring range (FC50...FB2...): 0 ... 68 Nm/s

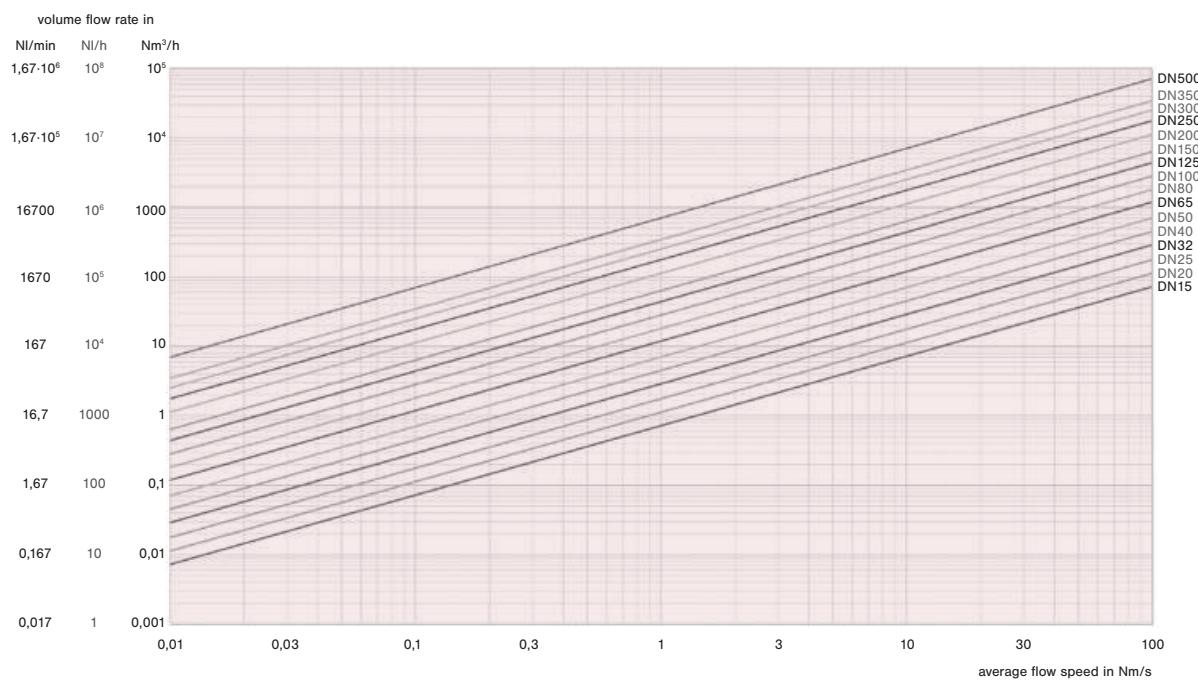

Standard velocity operating range (FC50...FB2...): 0 ... 100 Nm/s

Standard velocity measuring range (FC50...FB1...): 0 ... 25 Nm/s

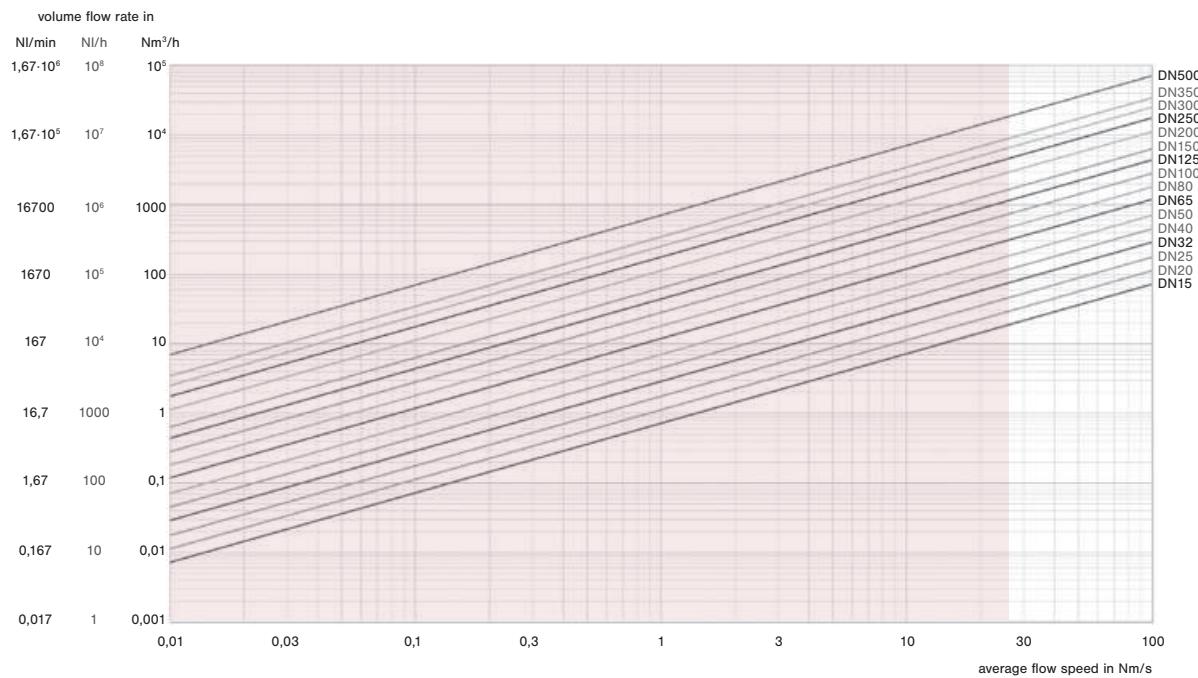

Standard velocity operating range (FC50...FB1...): 0 ... 25 Nm/s

| inner pipe diameter D in mm | operating range FB1 in Nm³/h | operating range FB2 in Nm³/h | inner pipe diameter D in mm | operating range FB1 in Nm³/h | operating range FB2 in Nm³/h |

Sensor adapter TP/Ball valve BV

TP-...
BV-...
Description

Sensor adapters TP and BV facilitate correct positioning and exchange of FC50-CA...11... (plug-in type connection) in pipes with process connection DN 15...DN 50.

Ball valve BV enables pressure-free installation or removal of FC50-CA...11... (plug-in type connection) simply by closing the input and output pipe. The measuring points are suited to temporary measurements; after completion of the measuring cycle they can be closed by means of blanking plugs.

Features

- Correct positioning of sensor
- Ease of sensor replacement
- Measuring point can be closed if not used
- Sensor adapter available as screw-in or welding type
- Ball valve also serves as a shutoff valve (both input and out output)
