

Safety

for elevators, bucket chain conveyors and conveyor belts

The perfect control

ALS 906 Serie

- Speed/alignment/bursting discs
- speed + alarm display
- sensor monitoring
- wire monitoring
- single alarm
- group alarm
- 1-10 sensors
- max 2 speed sensors
- max 8 alignment sensors
- max 8 bursting discs/backup indicators
- optional RS485 interface
- internal logbook (128 entries)
- default memory

ALT 605 Serie

- Connection for 2 elevators
- 1-10 sensors
- max 8 x bearing temperature sensors
- max 2 motor temperature sensors
- single limit value
- group limit alarm
- single and group alarm
- temperature and alarm display
- 1 - 4 alarm outputs
- optional RS485 interface
- internal logbook (128 entries)
- default memory

Linking
ALS906 / ALT605
can be linked via the RS485
interface with other
networks

software example with RS485 included in scope of supply

Guidelines for explosionprotection according to ATEX 94/9/EG enclosure II, par..1.5.1

Safety devices have to function independantly from internal measuring- and/or control devices. [...] Switching operations with direct impact on the final controlling element must be possible without software control. Agromatic safety units and sensors have been designed and constructed in this regard. According to example database from BGR104 evelators, conveyor belts and general conveyors should be monitored on slippage, alignment and temperature increase in bearings.

These methods, described in EN 1127-1 (principles and methodology Ex-protection), EN 13463-5 (constructive safety), EN954-1 cat. 2 to 4 resp. SIL2-3 acc. to EN61508, EN 13463-6 (control of ignition sources) have been considered in the Agromatic unit serie ALS906 and ALT605.

Worldwide the conveyor is one of the most dangerous machine used in mills etc. By a qualitatively high safety control with speed- and alignment sensors, combined with bearing temperature control the dangerous conditions can be avoided (protection for personel and machines). The units mentioned underneath enable the safe and complete protection of elevators, bucket chain conveyors and conveying belts. Agromatic offers the complete range starting with all ATEX tested sensors up to the control units with the single components. You can choose from the wide range of complete sets (sensors and control unit) or single components. The variety allows safety control in all possible applications (example double conveyor).

Components: the control units

ALS906

Art. 5060001

Combined speed- alignment control unit for connection of max. 10 sensors. Simply configuration at site due to clear parameter control. 1 - 2 alarms for optical single alarming can be set.

Alarm outputs pot-free relay contacts. Adjustable pull time delay (15sec). Display of nominal speed. Adjustable tolerance values. For connection of all Agromatic standard sensors, for operation in all zone categories. Constant wire and sensor control. Safety categorie 2. DIN 35 snap housing. Display of values. Optional RS 485 data interface with program example for S7. Auxiliary supply 24 VDC. Integrated logbook for 128 entries. (measuring range speed 5 - 9999rev/min)

ALT605

Art. 5262

10-channel temperature control unit for safety control of bearing control of bearings of 1 or 2 elevators (with motor) simultaneously. Control of each 4 shaft bushings and drive temperature. Automatic scanning of connected temperature sensors, scanning of adjusted limit value, display of temperatures with sensor number and alarm output (alarm memory). Alarms can be configurated for 1-4 pot-free relay alarm outputs or via an optional RS 485 data interface with program example for S7. Safety category 2. DIN 35 snap housing, auxiliary supply 24 VDC. Integrated logbook for 128 entries. For the operation in all zone categories. Measuring range -30..210°C, Ex II (1) D

ALSP10

Art. 7166 Power supply unit 115/230AC/24VDC for ALS605 or ALT 605 units with sensors. Connection up to 10 units. DIN 35 snap housing (only necessary if 24V is not available in switchbox)

Components: the sensors

ASLS2000 PNP NC for zone separation 20/22

Art. 2120

Opto-magnetical safety sensor for alignment control of elevator belts, mainly for application with plastic buckets and double elevators (two sensors per alignment are needed). Adjustment not necessary. No mechanical wear parts. Fibreglas with rod breaking protection. Intrinsic safe construction for application in zone 20 with zone separation. Auxiliary voltage 10-35VDC Integrated thermo fuse.

Ex II 1/3 D IP 65 T 90°C.

ASIQ80 CE80 PNP NC+NO for zone 22

Art. 3080010

Interference resistant, inductive sensor with mountingbow in aluminium art. 3080007 for alignment control of elevator belts especially with application of metal buckets. (Two sensors per alignment control are needed, at right and left side).

Fixing behind sight glas art. 3714 with included mountingset. Connectioncable 2m, shielded. Power supply 10-35 VDC signaloutput PNP NC max. 200mA
Switching distance adjustable in the range of 10-80mm. LED display. Installation size 80x80x50mm

Application in zone 22: Ex II 3D tc IIIC T80°C Dc

ASI12 CE4 PNP NC Art. 4006, PNP NO Art. 4005

ASI18 CE8 PNP NC+NO Art. 4023

with shielded connectioncable 1.5m

Inductive sensor for speed registration and bursting disc with 4 or 8mm switching distance.

Scanning of speed at base/drive shaft (shaft extension, keyway or at shaft or other projecting parts like e.g. screws). The same sensor is used for the control of spill flaps and bursting discs

Delivery complete with 2 fixing nuts. Connection voltage 10-35 VDC

Signal output PNP max. 200 mA

Switching distance max. 4 / 8mm LED functioning display

Diameter 12mm (M12x1mm), 18mm(M18x1mm)

Integrated thermofuse

Application in zone 22: Ex II 3D Ex tc IIIC T80°C Dc

ROTO art. 3080014

The Roto speed sensor can easily be mounted at the shaft by means of the M8 thread. Either a M18 sensor can be used or even a M30 by just turning the mounting bracket. The white belt acts as stabilisation. The speed transmitter is protected by the transparent polycarbonate housing. Rugged construction in V2A stainless steel.

ABR 100 art. 5070001

Deflection pulley switch for zone 1/2 and 21/22
Safety deflection pulley switch for monitoring of conveyor belts running with control unit ALS906

Wheel height 95mm, adjusting range 100mm
Scanning contact 1 switch (3-wire safety switching), max admissible contactload 250VAC 6A/ 24/230VDC 0,25A
Ex II 2G EEx de IIC T6 / Ex II2D IP65 - T80°C

Threaded temperature sensor art. 1207

M8x10mm for integration in bearing shells, with 2m shielded connectioncable.
Application zone 22: Ex II 3D Ex tcD IIIC IP67 T 200°C Dc

Threaded temperature sensor art. 5030008

M10x1 length 10mm for integration in bearing shells, with 2m shielded connectioncable.
Application zone 22: Ex II 3D Ex tcD IIIC IP67 T 200°C Dc

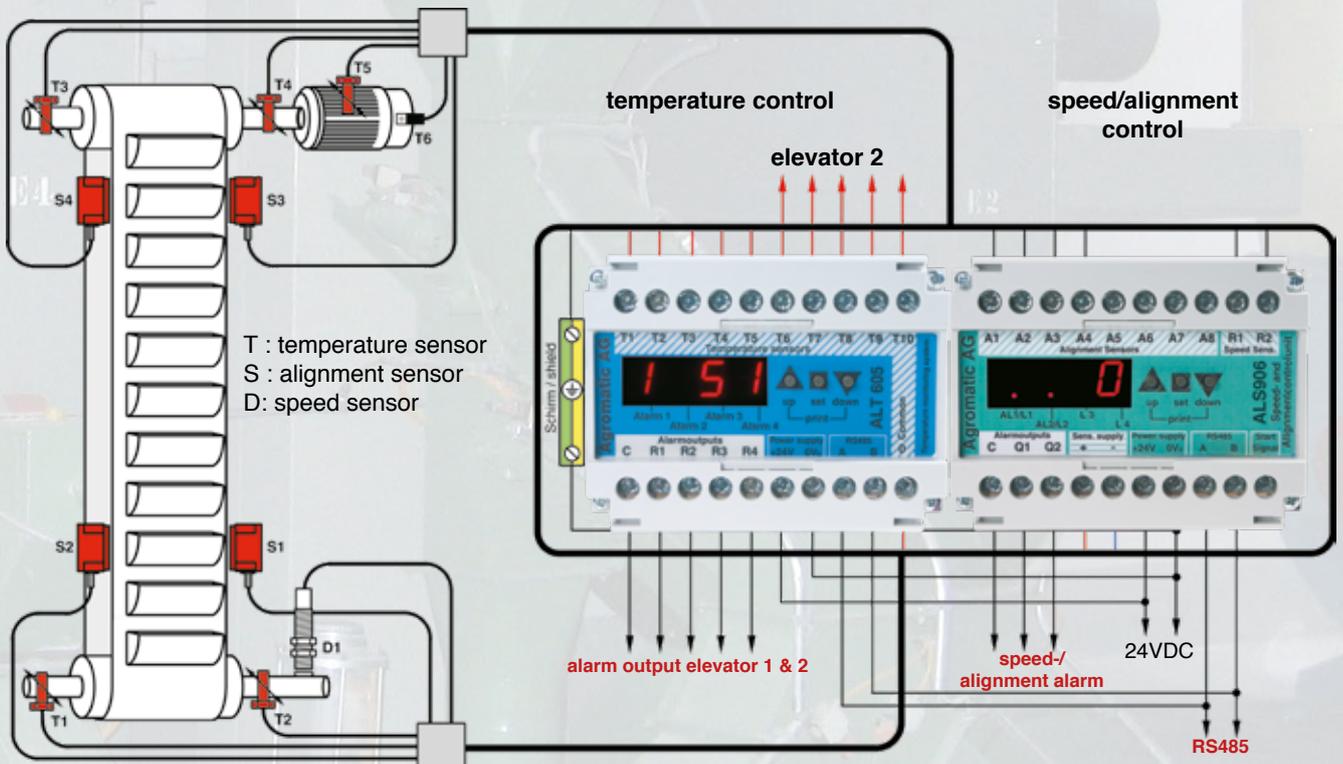

Flat temperature sensor AFTF50 art. 1218

Sensor for fixing to existing motor screws, under grease nipple or fixing by means of strap. With 2m shielded connectioncable.
Application zone 22: Ex II 3D Ex tcD IIIC IP67 T 200°C Dc

The principle

The complete monitoringset of **Agromatic** allows modular construction based on the special requirements of the explosion document.

The modular conception allows extension at all times. The electrical wiring can be combined for speed-/alignment and temperature control. This enables to only use one wire from control to head or base of elevator. Attention: electrical junctionboxes are not included in the scope of supply. Basically: only shielded cable with a shield of at least 50 dB should be used

Complete sets always consist of control unit and sensors, but without auxiliary material such as screws, cable and junction-boxes. For application of inductive sensors zone separation sight glasses have to be ordered separately. However the ATEX protection/- fixingbows are included in the standard scope of supply for ATEX sensors. Please pay attention to the zones specified in your explosion specification document for your plant. Take into account the specific country regulations. Please contact us for further information. Alignment control for elevators: for heights of more than 25m (or safety category 2-4) we recommend to scan alignment at top and base shaft.

Please make the selection: complete sets or single units

Set :	Voltage:	Art. No:	Description:
ALS906/D	24VDC	506 0002	electronic unit with 1 ASI12 speed sensors
ALS906/D/D	24VDC	506 0003	electronic unit with 2 ASI12 speed sensors
ALS906/S	24VDC	506 0004	electronic unit with 2 ASIQ80 alignment sensors (inductive)
ALS906/S/S	24VDC	506 0005	electronic unit with 4 ASIQ80 alignment sensors (inductive)
ALS906/D/S	24VDC	506 0006	electronic unit with 1 ASI12 speed - and 2 ASIQ80 alignment sensors (inductive)
ALS906/D/S/S	24VDC	506 0007	electronic unit with 1 ASI12 speed - and 4 ASIQ80 alignment sensors (inductive)
ALS906/D/S/S/S	24VDC	506 0008	electronic unit with 1 ASI12 speed - and 8 ASIQ80 alignment sensors (inductive, for double elev.)
ALS906/SO	24VDC	506 0009	electronic unit with 2 ASLS2000 alignment sensors
ALS906/SO/SO	24VDC	506 0010	electronic unit with 4 ASLS2000 alignment sensors
ALS906/D/SO	24VDC	506 0011	electronic unit with 1 ASI12 speed- and 2 ASLS2000 alignment sensors
